*Transactions sizes are given in lots. Value of 1 lot equals 100'000 term currency.

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. **77% of retail investor accounts lose money when trading CFDs with this provider.** You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

Trading Conditions Guide

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. **77% of retail investor accounts lose money when trading CFDs with this provider.** You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

Trading Conditions Guide

1. Pips

A pip is the smallest price change that any currency or financial instrument can make. For most currency pairs, it is equal to a 0.0001 price change in the quote currency. In currencies with low unit price, a pip can represent 0.01 units, one notable example being the Japanese Yen.

2. Transaction sizes

Swissquote offers flexible transaction sizes throughout all of its trading platforms. In addition, whenever the markets are open, our trading desk is available to assist you in placing orders, including transaction sizes greater than the ones stated in the conditions tables above.

3. Trading Hours

Swissquote maintains a 24 hour trading operation available for you by telephone or through all of its trading platforms whenever the markets are open, starting from 23:00 CET Sunday to 23:00 CET Friday.

4. Swap rates

Swap rates, also known as overnight or rollover rates, are either earned or paid for holding a position overnight. Swissquote settles overnight positions at 23:00 CET using the applicable formula and swap rates table below.

Calculation Example:

AUDJPY Short/Long Swap Rate: -0.00784983 / 0.00455597

Position: Sell 100,000 AUDJPY

AUDJPY Exchange Rate: 96.553

MetaTrader Swap Formula:

(Base Amount * Short Swap Rate) / AUDJPY exchange rate)

(100,000 * - 0.00784983) / 96.553 = You pay 8.13 AUD

Swissquote applies a triple swap on **Wednesday 23:00 CET** to account for weekend rollovers.

There are some exceptions to this rule:

- Triple swap rollovers will be applied **Thursday 23:00 CET** for USDCAD, USDTRY and USDRUB.
- Triple swap rollovers will be applied **Friday 23:00 CET** for LCOUSD, NGCUSO, OILUSD, DAXEUR, ESXEUR and SMICHF.

All swap rates are available on the website: www.swissquote.eu/forex/conditions

| Client Position | Negative Swap Rate | Positive Swap Rate |
|-----------------|--------------------|--------------------|
| Long | You Receive | You Pay |
| Short | You Pay | You Receive |

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage. **77% of retail investor accounts lose money when trading CFDs with this provider.** You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

5. Cash adjustments

When any underlying stock that is part of a Spot Stock Index goes ex-dividend, the Spot Stock Index will be price adjusted to reflect this dividend. The weighted proportion of the applicable dividend within the Spot Stock Index will be credited (Long Positions) or debited (Short Positions) as a cash adjustment on your account on the Ex-date reflecting the market price movement on the Ex-dividend date. Only open positions held overnight on ex-dividend date are subject to dividend cash adjustments.

Please note: Spot Germany 30 is a Total Return Index, meaning the index is automatically adjusted for dividends.

6. Leverage & Margin Requirements

By default, Swissquote Bank has an initial margin requirement of 1% on most popular FX instruments, meaning that you need collateral on your account equal to 1% of the notional value of the position you want to open. In other words, your positions can be leveraged up to 100 times. In some cases, based on the client's profile & trading behavior, leverage can be set up to 400:1.

7. Stop Out Level

Swissquote's trading platforms are designed to automatically close open positions when the Margin Level ($[\text{equity}/\text{used margin}] \times 100$) reaches the Stop Out level. The largest losing positions are automatically realized when the Margin Level falls below 30%, regardless of the size of open positions.

Leverage Example

In order to buy 100,000 EUR/USD at an ask price of 1.10, you would need 110,000 USD. With a leverage of 100:1 you only need to have the equivalent of 1,100 USD of available cash on your account (1% of the notional value of 110,000 USD) to open the position.

Margin Level Calculation Example

$((\text{Account Balance} + \text{Unrealized P\&L})/\text{Margin requirement on net open position}) \times 100 = \text{Margin Level}$

Trader X has a 10,000 USD balanced with an unrealized P&L of +1,000 USD. The open positions include long 300,000 USDCHF and short 200,000 USDCHF. Net open position is 100,000 USDCHF

$((10,000 \text{ USD} + 1,000 \text{ USD})/1,000 \text{ USD}) \times 100 = 1,100\% \text{ Margin Level}$

Risk Warning

Swissquote Ltd is authorised and regulated in the United Kingdom by the Financial Conduct Authority, FCA number 562170.
